

AMENDMENTS TO THE CLAIMS

1. (Cancelled)

2. (Currently Amended) A mattress to be laid on a platform of an adjustable bed having a transformable bed surface,

wherein a mesh is formed on a front face of the platform, the front face forming at least part of the bed surface,

a fixture disposed on a surface of the mattress facing the platform having a generally planar member and at least one projection portion configured to interlock releasably with the mesh ~~that engages with the platform to secure the mattress is disposed on a surface of the mattress facing the platform, and~~

the fixture secures the mattress by tightly fitting into one or more interstices of the mesh.

3. (Cancelled)

4. (Previously Presented) The mattress of Claim 2, wherein the fixture is disposed, on the surface of the mattress, in a part of the mattress corresponding to a lower back region of a user lying on the mattress.

5. (Currently Amended) ~~The~~ A mattress of Claim 2, wherein ~~to be laid on a platform of an adjustable bed having a transformable bed surface.~~

wherein the adjustable bed includes:

a mesh formed on a front face of the platform, the front face forming at least part of the bed surface,

~~the mattress is used with the adjustable bed including,~~

the platform of which the front face is flexible,

a flex mechanism operable to flex the platform to form a flexion position that includes at least one of a sitting-up position and a knee break, and

a tilt mechanism operable to tilt the front face laterally, and

both the flex mechanism and the tilt mechanism are operable with the other mechanism in operating condition,

a fixture that engages with the platform to secure the mattress is disposed on a surface of the mattress facing toward the platform, and

the fixture secures the mattress by tightly fitting into one or more interstices of the mesh.

6. (Previously Presented) A mattress-equipped adjustable bed having a transformable bed surface, comprising:

a mattress of Claim 2.
